

Swag Labs Enterprise Test Execution Report

Comprehensive QA Execution Report
Cycle 1
Prepared by: Senior QA Test Engineer
Date: 02-Sep-2026

1. Document Control

Project: Swag Labs
Report Version: 1.0
Execution Cycle: Cycle 1
Environment: QA
Build Version: Not Av
Release Recommendation: NO-GO

Version	Date	Author	Change Summary
1.0	02-Sep-2026	Senior QA Engineer	Initial Report

2. Executive Summary

This execution cycle focused on validating the critical user journeys including Authentication, Inventory Management, Product Navigation, Shopping Cart operations, Checkout workflow and Navigation Menu functionality. Testing identified significant issues affecting core e-commerce workflows. Based on the observed results, production deployment is not recommended until remediation and regression validation are completed.

3. Test Scope

In Scope: Login, Logout, Product Listing, Product Details, Product Images, Pricing, Sorting, Add to Cart, Remove from Cart, Cart Validation, Checkout and Menu Navigation.

Out of Scope: Backend APIs, Database Validation, Infrastructure Validation and Performance Benchmarking.

4. Test Environment

Application	Swag Labs
URL	https://www.saucedemo.com
Environment	QA

Browser	Not Av
Build	Not Av
Test Users	standard_user, visual_user, problem_user, locked_out_user

5. Execution Dashboard

Total Test Cases	35
Executed	35
Passed	14
Failed	21
Blocked	0
Pass Rate	40%
Fail Rate	60%

6. Module Wise Results

Module	Executed	Passed	Failed	Pass %
Authentication	5	3	2	60%
Inventory	10	3	7	30%
Cart	8	2	6	25%
Checkout	4	2	2	50%
Product Navigation	4	1	3	25%
Navigation	4	3	1	75%

7. Requirement Coverage Summary

Authentication requirements were partially satisfied. Inventory and Cart requirements exhibited the highest failure concentration. Checkout validation failures present business risk because purchasing controls may behave incorrectly under certain scenarios.

8. Defect Analytics

Critical	4
Major	12
Minor	5
Total	21

9. Priority Distribution

High	13
Medium	6
Low	2

10. High Risk Defects

Incorrect Product Navigation: Product links redirect users to unintended products creating incorrect purchase risk.

Add To Cart Failure: Core purchase workflow impacted, affecting revenue path.

Checkout Validation Failure: Checkout can proceed under invalid conditions.

Product Mapping Issues: Images and product information may not match expected products.

11. Defect Classification Analysis

Candidate Application Defects: 20. Requirement Validation Needed: 1. Confirmed Application Defects: Not Av. Automation Failures: 0. Environment Issues: 0. Failed tests were reviewed before defect classification to avoid assuming every failed test represents a confirmed application defect.

12. Business Impact Assessment

Cart and checkout failures carry the highest business risk because they directly influence customer purchasing capability. Navigation and product-mapping issues can lead to customer confusion, loss of trust and incorrect purchasing decisions.

13. Risk Matrix

Risk	Probability	Impact	Rating
Cart Failure	High	High	Critical
Checkout Validation	High	High	Critical
Navigation Mapping	High	High	Critical
UI Issues	Medium	Low	Medium
Image Mapping	Medium	Medium	Medium

14. Retesting and Regression Strategy

Phase 1: Defect Retesting. Phase 2: Smoke Testing. Phase 3: Targeted Regression. Phase 4: Full Regression Suite. Phase 5: Release Validation and QA Sign-off.

15. Exit Criteria Assessment

All Test Cases Executed	Met
Critical Defects Closed	Not Met
High Defects Closed	Not Met
Regression Complete	Met
QA Sign-off Ready	Not Met

Release Ready	No
---------------	----

16. Lessons Learned

Requirement reviews should be conducted earlier. High-risk business paths such as cart and checkout should receive additional exploratory testing. Automation coverage should be increased for navigation mapping, cart operations and checkout validation.

17. Recommendations

1. Resolve critical defects.
2. Validate product mapping logic.
3. Complete defect retesting.
4. Execute full regression.
5. Conduct cross-browser validation.
6. Obtain stakeholder approval before release.

18. Final QA Assessment

Overall Status: Conditionally Not Ready for Release. Release Decision: NO-GO. Significant business-impacting issues remain open and must be resolved prior to production deployment.
